## Hints on Correct Use

### ■ INFRARED REFLOW SOLDERING

Secure the thermocouple to the side of each switch terminal with solder having a high melting point. Then set the reflowing furnace so that the peak value of the terminal temperature becomes  $230^{\circ} \pm 5^{\circ}\text{C}$ . Take care that the peak value does not exceed  $240^{\circ}\text{C}$ . The temperature and the time conditions for the reflow soldering process are as shown in the chart at right.

### ■ WAVE SOLDERING

Dip the bottom of the PC board as follows:

- Solder temperature:  $250^{\circ}\text{C} \pm 5^{\circ}$  max.
- Exposure to molten solder: 5 s max.

Do not dip solder the keyswitches more than twice.
